

Practical Mathematics

Jim Ausfahl

General Idea of Content

- **Some Basic Mathematical Concepts and Tools**
- **Practical Applications of Those Tools**
- **Financial and Business Applications of the Tools**
- **Spreadsheet Principles for Applications**
- **Biblical Principles Related to These Applications**

Expectations

- **All videos will be viewed at least twice**
- **Recommend materials will be downloaded and read**
- **Students will practice working with the mathematical principles until comfortable with them**
- **The homework assignments will be completed and, if needed, sent in**

Disclaimers

- **Since I live in the USA, money will be dollars and cents—because it's what I'm used to, not because dollars are better**
- **When I refer to legal points, it will be the US legal points. They're what I know, not what is ideal. You must check for the laws of your own nation, but the principles will be similar**
- **The spreadsheet used for demonstrations will be a version of EXCEL. There are others just as good; I just happen to have EXCEL. Several versions of it!**

Goals

- **Understanding of some mathematical principles**
- **Learning basic tools to aid financial transparency in your ministry**
- **Equipping you with additional resources if you have a business of your own**
- **Glorifying God, and helping you manage your ministry and business to His glory**
